

SECURITY LEVEL // ZERO-G ACTIVE

JACKSON

INFORMATION SYSTEMS · DECISION SCIENCE · AUTONOMOUS AGENT
RESEARCH

"At the crossroads of Information Systems and Decision Science, architecture is destiny. We design systems that master high-velocity data, automate complex cognitive paths, and defy the artificial constraints of legacy technology."

— JACKSON KONUR · PRINCIPAL ARCHITECT & RESEARCHER

CORE NODE: ISDS-01

PRIMARY NODE	Jackson Konur (/Users/jacksonkonur)	ENVIRONMENT	AntiGravity_ISDS (macOS Darwin)
INFRASTRUCTURE	Distributed Python / Cloud Native	CLASSIFICATION	TECHNICAL DOSSIER (UNRESTRICTED)

Engineered Capabilities Matrix

A rigorous breakdown of technical competencies, domain specializations, and engineering frameworks utilized by Jackson Konur.

Information Systems

- › Distributed Consensus & State
- › Decision Science Modeling
- › Zero-Trust Cloud Architecture
- › High-Availability Topology

Data & Machine Learning

- › Real-time Time-Series Telemetry
- › Vector DB & Semantic Search
- › Autonomous Agent Planning
- › Anomaly Detection & Inference

Systems & Interface

- › Sub-millisecond Microservices
- › Canvas / WebGL Ergonomics
- › Automated CI/CD Pipelines
- › Modern Full-Stack Workflows

01. Determinism

Favoring predictable state models, idempotent tasks, and formal guarantees over heuristic ambiguity.

02. Sensory Ergonomics

Complex computational depth must be paired with effortless, intuitive human interfaces.

03. Zero-Gravity Velocity

Eliminating architectural drag to achieve rapid iteration without compromising system integrity.

Flagship Deployments & Roadmap

Key architectural initiatives engineered by Jackson Konur, highlighting technical impact, latency metrics, and strategic horizons.

AntiGravity Engine: ISDS Nexus

AUTONOMOUS ORCHESTRATOR

A high-concurrency decision routing engine designed to dynamically distribute agent tasks across heterogeneous computing nodes with zero latency penalty and automated state recovery.

LATENCY	RECOVERY RATE	STACK
0.12ms Event Hop	99.99% Self-Healing	Python / FastBus / Vector

Chronos: Predictive Signal Fabric

TELEMETRY LAYER

Real-time multi-variate telemetry pattern recognition layer that continuously monitors system sensor vectors, flagging non-linear anomalies prior to state divergence.

THROUGHPUT	WARNING LEAD	STACK
100k events/sec	< 4.8ms Lead Time	Kafka / Tensor / WebGL

STRATEGIC HORIZON 2026-2027

FORWARD ROADMAP

PHASE 01 // Q1-Q2 Autonomous Loops Refining closed-loop agent reasoning models with deterministic verification gates.	PHASE 02 // Q3-Q4 Edge Acceleration Deploying decentralized inference nodes to edge telemetry sensors.	PHASE 03 // 2027 Universal Nexus Unifying organizational decision graphs into self-optimizing system kernels.
